# Virtual Data Rooms

Secure, Productive Internal & External Collaboration

Employees in companies can open and edit corporate data from their PCs. Cortado Corporate Server enables mobile and flexible access to corporate data with smartphones or tablets. A major challenge however is collaboration among internal and external colleagues. Cloud-based solutions are too unsecure for companies and not all external access should be via the internal file server. With Cortado Corporate Server, internal as well as external colleagues can access and share documents. Thanks to the on-premises architecture in the virtual data rooms, control remains firmly with the company's IT department.

**Easy:** Intuitive to use, directly in the application, without additional apps

**Secure:** Data remains in the company and does not end up in the cloud

**Productive:** Internal and external cooperation including file access

## Securely Share Documents – Work Together Productively

Mobile workers want easy access to corporate data. Productive working with files on smart-phones and tablets is easy and intuitive thanks to Cortado Corporate Server. For sharing with external colleagues, e-mail accounts, cloud services, or even messenger services are used. This results in an outflow of sensitive corporate data, which can again be forwarded fully uncontrolled. What is required to solve this issue is an enterprise-grade file sharing solution, which eliminates security breaches by offering a secure, easy-to-use, on premises alternative. However, the demands placed on virtual data rooms for successful collaboration between internal and external colleagues are particularly high:

- Ease of use
- Security when exchanging files
- Flexible access to documents
- Joint project work both internally and externally
- Access control and auditing
- Enforce corporate policies
- Use without cloud components

Cortado Corporate Server creates virtual data rooms, which combine the advantages of firewall-protected, centralized data storage with location, device-independent file access.

### Advantage for Employees: Just Like the Cloud

Employees can easily use their mobile devices in the enterprise and quickly share sensitive files. With Cortado Corporate Server, all data remains in the enterprise, can be downloaded and automatically saved back. Employees benefit especially from high transfer speeds, location independence, and flexibility when it comes to rights assignment in addition to the wide range of editing features.

### Advantages for Businesses: Highly Secure

With Cortado Corporate Server, companies are certain that their shared data remains within their control. During data transfer, both the DMZ and end-to-end encryption ensure the highest levels of protection. Data can only be accessed with a password. Access rights and denials are set individually by the company. The auditing feature ensures monitoring of processes, requirements, and guidelines for compliance with the standards set by the company.

## Get Started Now:

Download the software for free with all features for 30 days directly in your environment. Alternatively, contact us for a live online demo. For more information about Cortado Corporate Server such as whitepapers, webinars and videos, visit:
